PROACTIVE RISK MANAGEMENT

PARM

THREAT ASSESSMENT WORKSHOPS

See what others don't see!

Assessing threats before they happen is an important skillset for security professionals in many venues, from international special events to building and facilities management. Properly assessing and managing those threats could mean the difference between life and death for organizations that require their employees to put themselves in the path of potential danger on a daily basis. We offer a number of groundbreaking and revolutionary training workshops that combine the latest in scientific research on threat analysis and management from the perspective of human behavioral signatures of maltinent and deception that can add enormous value to any security professional or system.

PARM's threat assessment workshops all leverage the latest, state-of-the art scientific research on the behavioral indicators of malintent and deception. This research includes Humintell's latest studies of operational terrorists' mindsets – the cognitions, emotions, and behaviors of bad actors when they're actively engaged in an act of violence. Our workshops offer trainees the most recent information about valid and reliable behavioral indicators concerning bad actors who are operational, i.e., currently engaged in conducting an act of violence, and actors with malintent who need to deceive operational security personnel about their intent to commit an act of malfeasance. Our workshops are powered by findings from the latest research on these topics funded by the Department of Homeland Security, Department of Defense, and the Federal Bureau of Investigation.

Our workshops are relevant to all security personnel involved in perimeter and checkpoint security, active engagement with potential threats, and the identification of signs of imminent assault and aggression. The techniques taught involve not only the observation of behavioral cues, but also conversational and brief interview strategies that amplify the production of such cues. Participants also learn the unique facial expressions associated with imminent aggression using Humintell's proprietary training tool based on cutting edge research in this area. These studies are the only ones of their kind to isolate a unique set of facial expressions reliably associated with imminent aggression. All of PARM's techniques are based on behavioral indicators proven to be applicable across cultures and languages.

Upon request, the training also encompasses physical perimeter security reviews, as well as active shooter response training.

- **Learn about behavioral indicators of malintent and deception based on state-of-the-art scientific research**
- **Focus on valid and reliable indicators proven by science, not anecdote or hearsay**
- **Learn not only to assess, but also mitigate threats and reduce risks**
- **Applicable across cultures, countries, and languages**
- **Ideal for all security personnel**
